Virtual Teaching Library: Searching subject headings
Virtual Teaching Library: Boolean operator AND

You need articles about apples and pears.

Articles about both apples AND pears.

The tricky part is that the operator AND retrieves fewer articles, not more. That is because the operator AND retrieves only the articles that talk about both apples and pears.

Use the Boolean (logical) operator AND to narrow down the results of your search.

5. Ask a Librarian
Conclusion

WebCT:

◆ Enhances library instruction and other library services
◆ Supports the Seven Principles for Good Practice in Undergraduate Education
◆ Allows the application of direct instruction, differentiated instruction, and knowledge building theory for efficient teaching and learning
◆ Demonstrates the necessity of library presence in the online environment
◆ Strengthens the position of librarians as partners in the educational/instructional process
