Using GSP to study transformations of a sine curve, related to study of tsunamis.

Name: Rose Kossow

Grade level(s)/Subject taught: 10-12 Mathematics

Objectives:

Students will use a GSP model to learn how variables in the general form affect the graph of a sine function.

1. Write the Mathematical Concept or “key idea” that modeling will be used to teach: (e.g. Students use mathematical modeling/ multiple representation to provide a means of presenting, interpreting, communicating, and connecting mathematical information and relationships)

--

Materials: GSP model, worksheet

“...a rich **one-page, single-spaced**, description or a *vision* of your best thinking...”

Prompts:

1. How will you assess the prior knowledge of the student?
2. How will you begin the lesson?
3. What are the teacher and students doing every 5-10 minutes? (Teacher Actions and Student Actions)
4. How will you assess the learning for the lesson?

Using _____ I plan on having my students...
(software / modeling package(s))
